

CORRECTION SLIP

Title: *Progress in adapting to climate change
2023 Report to Parliament*

Session: 03/23

ISBN: 978-1-5286-3943-9

Date of laying: 29 March 2023

Correction:

In the summary table of the Nature chapter 2, p52. This is based on further evidence provided to the CCC from Defra on the methodology and data for assessing England's water environment [State of the water environment: long-term trends in river quality in England - GOV.UK \(www.gov.uk\)](https://www.gov.uk/state-of-the-water-environment-long-term-trends-in-river-quality-in-england)

Text currently reads:

The majority of surface water bodies in England are in very poor condition, while abundance data for freshwater species indicate populations remain at low levels over the long-term.

Text should read:

The majority of surface water bodies in England are in an average to poor condition, while abundance data for freshwater species indicate populations remain at low levels over the long-term.

Date of correction: 11 April 2023
